Question 1 Correct Flag question	Given an array of numbers, find the index of the smallest array element (the pivot), for which the sums of all elements to the left and to the right are equal. The array may not be reordered.
	Example
	 the sum of the first three elements, 1+2+3=6. The value of the last element is 6. Using zero based indexing, arr[3]=4 is the pivot between the two subarrays.
	The index of the pivot is 3. Function Description
	Complete the function balancedSum in the editor below.

Status Finished

Returns:
int: an integer representing the index of the pivot

balancedSum has the following parameter(s):

int arr[n]: an array of integers

Constraints

- . 3 ≤ n ≤ 10^5 . 1 ≤ arr[i] ≤ 2 × 10^4 , where 0 ≤ i < n
- · It is guaranteed that a solution always exists.

Input Format for Custom Testing

Input from stdin will be processed as follows and passed to the function.

The first line contains an integer n, the size of the array arr.

Each of the next n lines contains an integer, arr[i], where $0 \le i < n$.

```
Sample Case 0
Sample Input 0
STDIN Function Parameters
     \rightarrow arr[] size n = 4
     \rightarrow arr = [1, 2, 3, 3]
2
3
3
Sample Output 0
2
Explanation 0
      The sum of the first two elements, 1+2=3. The value of the last element is 3.
      Using zero based indexing, arr[2]=3 is the pivot between the two subarrays.
      The index of the pivot is 2.
```

```
Sample Input 1
STDIN Function Parameters
    \rightarrow arr[] size n = 3
   \rightarrow arr = [1, 2, 1]
2
Sample Output 1
Explanation 1
      The first and last elements are equal to 1.
      Using zero based indexing, arr[1]=2 is the pivot between the two subarrays.
      The index of the pivot is 1.
```

Sample Case 1

Answer: (penalty regime: 0 %)

```
1 . /*
     * Complete the 'balancedSum' function below.
 2
 4
     * The function is expected to return an INTEGER.
     * The function accepts INTEGER ARRAY arr as parameter.
 5
 6
    #include<stdio.h>
   int balancedSum(int arr count, int* arr)
9
        int totalsum = 0;
10
        for (int i =0;i<arr count;i++)</pre>
11
12 v
            totalsum += arr[i];
13
14
        int leftsum =0;
15
        for(int i =0;i<arr count;i++)</pre>
16
17 ,
            int rightsum = totalsum - leftsum -arr[i];
18
19
            if(leftsum==rightsum)
20 4
21
                 return i;
22
23
            leftsum +=arr[i];
24
25
        return 1;
26
```

	Test	Expected	Got	
~	<pre>int arr[] = {1,2,3,3}; printf("%d", balancedSum(4, arr))</pre>	2	2	~

Question 2 Correct	Calculate the sum of an array of integers.
Flag question	Example
	numbers = [3, 13, 4, 11, 9]
	The sum is $3 + 13 + 4 + 11 + 9 = 40$.
	Function Description
	Complete the function arraySum in the editor below.
	arraySum has the following parameter(s): int numbers[n]: an array of integers
	Returns
	int: integer sum of the numbers array

Constraints

```
24
Explanation 1
12 + 12 = 24.
Answer: (penalty regime: 0 %)

Correct
Flag question
```

minimized. Then, compute the sum of those absolute differences. Example n = 5 arr = [1, 3, 3, 2, 4] If the list is rearranged as arr' = [1, 2, 3, 3, 4], the absolute differences are [1 - 2] = 1, [2 - 3] = 1, [3 - 3] = 0, [3 - 4] = 1. The sum of those differences is 1 + 1 + 0 + 1 = 3. Function Description Complete the function minDiff in the editor below, minDiff has the following parameter; arr; an integer array Returns; int; the sum of the absolute differences of adjacent elements Constraints $2 \le n \le 105$ $0 \le arr[i] \le 109$, where $0 \le i < n$ Input Format For Custom Testing The first line of input contains an integer, n, the size of arr. Each of the following n lines contains an integer that describes arr[i] (where $0 \le i < n$). Sample Case 0 Sample Input For Custom Testing STDIN Function ---- $5 \rightarrow arr[]$ size $n = 5.5 \rightarrow arr[] = [5, 1, 3, 7, 3]$ 1 3 7 3 Sample Output 6 Explanation n = 5 arr = [5, 1, 3, 7, 3] If arr is rearranged as arr' = [1, 3, 3, 5, 7], the differences are minimized. The final answer is |1 - 3| + |3 - 3| + |3 - 5| + |5 - 7| = 6. Sample Case 1 Sample Input For Custom Testing STDIN Function ---- 2 \rightarrow arr[] size n = 2 3 \rightarrow arr[] = [3, 2] 2 Sample Output 1 Explanation n = 2 arr = [3, 2] There is no need to rearrange because there are only two elements. The final answer is |3 - 2| = 1.

Given an array of n integers, rearrange them so that the sum of the absolute differences of all adjacent elements is

Answer: (penalty regime: 0 %)

Reset answer

```
* The function accepts INTEGER ARRAY arr as parameter.
 6
    #include<stdlib.h>
    int compare(const void *a,const void*b)
10
        return (*(int*)a - *(int*)b);
11
12
    int minDiff(int arr count, int* arr)
13
14
        qsort(arr, arr_count,sizeof(int), compare);
        int totaldiff=0;
15
        for(int i =1;i<arr count;i++)</pre>
16
17 ,
18
            totaldiff += abs(arr[i]-arr[i-1]);
19
        return totaldiff;
20
21
22
                                  Expected Got
    Test
    int arr[] = {5, 1, 3, 7, 3};
                                                  ✓
                                            6
    printf("%d", minDiff(5, arr))
```

Complete the 'minDiff' function below.

* The function is expected to return an INTEGER.
